

UPLINK™

DIGITAL CELLULAR COMMUNICATORS

THIS CHANGES EVERYTHING

IT'S YOUR JOB

You have done your job well making the equipment decisions to ensure the physical security of your locations. You chose a sophisticated, monitored security system to protect your company's valuable assets. You know the risks from cut phone lines and failed alarm transmissions. But, wireless alarms were too expensive, coverage was a problem or monitoring stations had trouble receiving it.

WIRELESS THAT'S AFFORDABLE, UNIVERSAL & EASILY INSTALLED

Finally, you can afford it. The lowest cost hardware and airtime transport charges the alarm industry has ever seen. The UPLINK DigiCell 1500 can attach to any alarm panel and be received by all monitoring stations. Units can easily be installed in 20 to 30 minutes in most locations.

RELIABLE TECHNOLOGY

The DigiCell 1500 utilizes Cellemetry Data Service, the new patented wireless technology which slashes hardware and airtime prices while drastically improving cellular data transmission reliability. Cellemetry uses the cellular phone system, but it communicates on the secure digital part of the network with 2-way signaling. No busy signals or dropped calls. And no cellular phone number cloning or fraud.

COMPLETE THE JOB

You've made good decisions, now make another. Insist on completing the security responsibility you have. Whether it's installing a wireless system for the first time or changing wireless systems to reduce costs and increase reliability, use UPLINK to secure your monitoring so help comes when you need it.

FINALLY...AFFORDABLE SECURED MONITORING
